Getting into Setup Mode:

1. Follow the instructions laid out in the diagram to the left.
2. After getting into configuration mode, set the parameters to the applicable settings as described below.

Fuji

Compatible Series :
PXR series controllers with MODBUS communication option
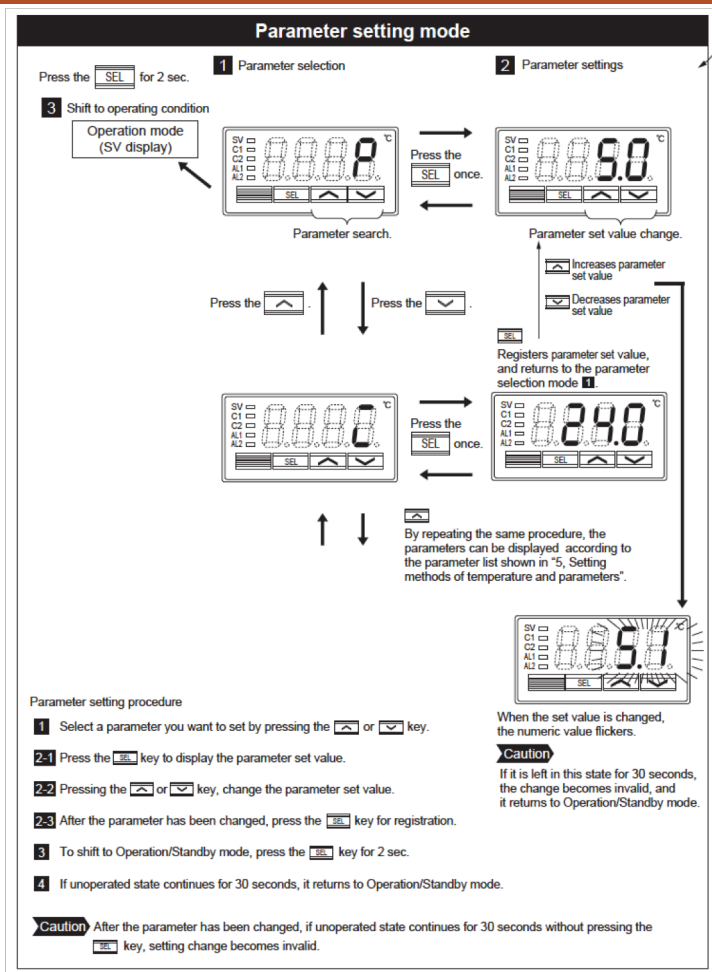

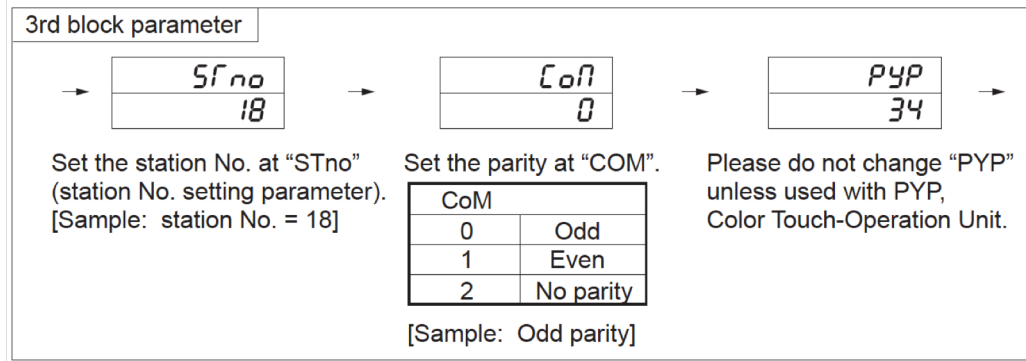

Controller Settings:
SRno - ***
CoN – 1 (Even)

*Note: ***SRno setting is the one parameter that changes for each controller. This is an important identifier for each controller and each controller requires a unique number. Typical setup starts at 1 thru however many controllers you have in your cellar.*

Refer to your controller manufacturers users for more information if needed. (links to their users manuals are listed on our SUPPORT site)
