1. Find a good time to in your brewing process to turn OFF power to your cellar tank panel.
   - *Please consult a licensed electrician if you do not feel comfortable installing this system.*

2. Open cellar tank panel and find good location to mount the din rail power supply and hub.

3. Connect wires as described in the diagram to the right.
   - *Some installs may require using the supplied orange and purple wires to daisy chain and connect all controllers in the panel.*

4. Once wiring is complete refer to the ADD A HUB document.
