CONFIGURE CONTROLLERS

Configuring Love and Automation Direct SOLO controllers

Getting into Setup Mode:

1. Hold the **SET** or  button for at least 3 seconds and then release.
2. Use the  button to cycle through settings until you reach the **CoSH** setting.
3. Use the Up or Down arrows to select the parameter settings that match the list to the right. Using the  button cycle through the rest of the settings until complete.

*Note: ***C-no setting is the one parameter that changes for each controller. This is an important identifier for each controller and each controller requires a unique number. Typical setup starts at 1 thru however many controllers you have in your cellar.*
